Mariano Damián Macías Gandulfo

Full Stack Developer | Frontend Specialist (React & TypeScript) & Node.js / NestJS Backend

Valencia, Spain (Remote / Hybrid) | EU Work Authorization | +34 623 912 847

mariano.maciasgandulfo@gmail.com | linkedin.com/in/marianomacias | github.com/soldiersnake | marianomaciasgandulfo.com

Professional Summary

Full Stack Developer with 4+ years of professional experience across the JavaScript / TypeScript ecosystem (React, Node.js, Express, NestJS) and university technical training in Programming. Specialized in building scalable interfaces, integrating enterprise Design Systems, and delivering high-reliability features for digital banking (OpenBank – Santander Group) and insurance platforms, backed by modular NestJS backends and RESTful APIs. Works AI-native every day: agentic development with Claude Code, Cursor and Gemini, connected through Model Context Protocol (MCP) servers to GitHub, databases and cloud platforms — the same workflow used to design and build GymBro, a multi-tenant SaaS for gyms, end to end. 3+ years mentoring 500+ developers in the MERN stack, bringing clear technical communication and a strong code-review culture to every team.

Work Experience

Frontend Developer (React & TypeScript) — Disid / Plexus Tech *Apr 2026 – Sep 2026 | Valencia, Spain (Remote)*

Client: Detriavall – Vetland CMS · Insurance Technology / Pet Insurance Platform

- Developed and maintained core modules of Vetland CMS, a React-based backoffice for a pet insurance platform, delivering full CRUD flows for Notifications (draft/scheduled sending, editing, deletion) and Onboarding (drag-and-drop step reordering with @dnd-kit).
- Built the frontend with React 19, TypeScript, Vite, MUI v9 and TanStack Query v5, integrating with a Quarkus backend connected to MuleSoft/Salesforce while coordinating with parallel Flutter mobile and backend teams.
- Designed and specified the authentication architecture: Firebase-based Microsoft 365 SSO issuing backend JWTs, with an environment-toggled legacy email/password fallback for a controlled rollout.
- Established an MSW-based mocking layer with in-memory per-domain data stores, enabling fully backend-independent frontend development and testing.
- Authored onboarding-oriented technical documentation in Confluence to support team knowledge transfer.

Frontend Developer (React & TypeScript) — Disid / Plexus Tech *Apr 2025 – Apr 2026 | Valencia, Spain (Remote)*

Client: OpenBank – Santander Group · Financial Services / Digital Banking

- Engineered and maintained the mission-critical bank transfers module for OpenBank, meeting strict financial security, performance and compliance standards.
- Integrated modular UI components from the internal enterprise Design System using Styled Components and Storybook, ensuring UI/UX consistency and faster delivery cycles.
- Applied strict TypeScript typing and built unit and integration test suites with Jest and React Testing Library to protect critical transaction flows.
- Took an active part in Scrum ceremonies, code reviews, production defect triage and banking RESTful API integrations.
- Applied AI-assisted workflows (Claude, Gemini) to generate edge-case tests and technical documentation.

Frontend & Full Stack Developer (React & NestJS) — Excelia *Dec 2024 – Apr 2025 | Remote (Spain)*

Client: IDEAUTO · Insurance & Automotive Tech

- Developed and deployed a web platform for digitizing vehicle sale, purchase and leasing contract documentation for the insurer IDEAUTO.
- Integrated React/TypeScript interfaces with NestJS backend services, diagnosing and debugging modular server logic and REST endpoints.
- Led fast bug resolution and refactored legacy code after joining the project, adapting the component architecture to evolving client requirements under tight deadlines.
- Managed version control and CI/CD pipelines across staging and pre-production with Azure DevOps, Fork and secure VPNs.
- Delivered accessible, responsive interfaces under Scrum, streamlining document upload and verification workflows.

Full Stack Developer (.NET & React) — Disbyte *May 2022 – Dec 2024 | Remote*

Enterprise Software Solutions

- Built enterprise web applications with React, TypeScript and Material UI (MUI), customizing component libraries to fit corporate business workflows.
- Built and maintained backend endpoints in .NET / C#: controllers, routing, and CORS and API security configuration.
- Diagnosed and fixed production bugs while mentoring junior developers on Full Stack standards and clean code practices.

MERN Stack Instructor & Technical Mentor (React & Node.js) — CoderHouse *Feb 2022 – Present | Remote*

EdTech & Engineering Mentorship

- Taught and mentored 10+ cohorts (500+ students) in MERN stack development (MongoDB, Express, React, Node.js), with 80%+ graduation and satisfaction rates.

- Ran in-depth code reviews of final capstone projects, assessing design patterns, clean code, asynchronous state management and academic integrity.
- Led live troubleshooting sessions, giving students practical debugging skills and industry-aligned best practices.

Featured Projects & AI-Native Development

GymBro — Multi-Tenant SaaS for Gym Management *gymbro.es | 2026 – Present*

React · TypeScript · Vite · Tailwind · PWA · NestJS · MongoDB · Stripe · Mercado Pago

- Designed and built end to end a mobile-first PWA for neighborhood gyms: members, memberships, QR-code access control, class booking with capacity and automatic waitlist, push notifications (Web Push/VAPID) and a metrics dashboard with role-based access (superadmin / admin / reception).
- Evolving it into a multi-tenant SaaS: dedicated NestJS backend that resolves each gym by subdomain (one MongoDB database per gym, no cross-tenant fallback), Stripe and Mercado Pago checkout with webhooks, moving to Stripe Connect so each gym is paid directly.
- Preparing a pilot with a first client gym. Built with an AI-native workflow: Claude Code connected via MCP to GitHub, MongoDB Atlas, Render and Vercel.

Cash Wise App — Financial Assistant with Integrated Chat *University capstone project*

- Built the entire React frontend of a financial platform — UI, styling, OpenAI API integration for a conversational assistant, and deployments — adding chat to a finance app before it was common. Team project; the PHP backend was built by a teammate.

Modular Multi-Tool AI Hub — Frontend Architecture & Generative AI *Personal project*

- Modular React / TypeScript dashboard consuming generative AI APIs for contextual translation, image generation/editing and domain-specific assistants, built on decoupled components with optimized state handling.

Technical Skills

Frontend & UI: React.js, TypeScript, JavaScript (ES6+), Vite, TanStack Query, Redux, Styled Components, Material UI (MUI), Tailwind CSS, Bootstrap, Storybook, PWA, HTML5 / CSS3 Responsive Design.

Backend & Databases: Node.js, NestJS, Express.js, .NET (C# foundational/intermediate), MongoDB / Mongoose, SQL (MySQL / PostgreSQL), Sequelize, TypeORM / Prisma, Firebase / Firestore, RESTful API design, Stripe & Mercado Pago integrations, Web Push.

Testing & Quality: Jest, React Testing Library, Vitest, MSW (Mock Service Worker), Code Reviews, Clean Code, Modular Architecture, Design Patterns (Dependency Injection, MVC, Component-Driven).

AI-Native Development: Agentic development with Claude Code, Cursor and OpenCode; Model Context Protocol (MCP) servers in the daily workflow (GitHub, databases, cloud platforms, browser automation); LLM API integrations (OpenAI, Anthropic Claude, Google Gemini); Prompt Engineering for code generation and refactoring.

Tools & Methodologies: Git, GitHub, GitHub Actions, Azure DevOps, Vercel, Render, MongoDB Atlas, Confluence, Postman, Fork, VS Code, Scrum / Agile.

Languages

Spanish: Native
English: Professional Working Proficiency (B2)

Education & Technical Training

Associate Degree in Programming (Tecnicatura Universitaria en Programación) — UTN *2021 – 2023*

Universidad Tecnológica Nacional, Facultad Regional Haedo · All coursework completed; official degree issuance in progress

Full Stack Web Development (Intensive Bootcamp) — Digital House *2021 – 2022*

University Extension Certifications in Web Development — UTN *2019 – 2020*

Frontend Developer, Full Stack Developer, React.js

Continuous Professional Training — Backend & AI *2024 – 2025*

NestJS scalable backend architecture, Node.js, TypeScript, OpenAI assistants with React & NestJS

Additional Professional Experience

Danone — Commercial Account Executive (2011 – 2019): managed corporate client portfolios and retail points of sale, building strong negotiation, client-relationship and cross-functional communication skills.
